

Gov 2008 Experimental Political Science

Ryan Enos

renos@gov.harvard.edu

Dustin Tingley

dtingley@gov.harvard.edu

Spring 2012 Tuesdays 2-4 PM

CGIS K-108

Office hours

Enos Thursday 2-4pm

Tingley, by appointment

Overview

The use of experimental and quasi-experimental data in political science is increasingly common. Researchers in comparative politics, American politics and international relations, and even political theory, are incorporating laboratory, survey, field, and natural experiments into their research designs. And the field of political methodology is regularly contributing to ways that experimental and quasi-experimental data may be analyzed.

This graduate level class will introduce students to experimental techniques and applications of experiments in political science. We will cover arguments about why experiments are useful, and arguments about why they are not useful. No one type of experimentation will be privileged and instead we will cover a variety of approaches.

While we will cover some statistical material, this class is not a substitute for the standard graduate methodology sequence. Students must have taken Gov 2000 and 2001 either prior to taking the class, or concurrently with 2001. While a graduate level class, undergraduates with exceptional prior training will be considered on a case by case basis.

There are three types of assignments. First, students will submit weekly typed notes on the readings. Each student will select two papers to write out notes for. For remaining papers students will submit two questions they have about the reading. We expect all students to have thoroughly done all readings. A recommended reading section contains additional readings should you wish to explore further. Second, everyone will present to the class a summary and critique of a paper chosen by the instructors. Finally, students will collaborate to produce a final project that contains an original experimental design and preliminary data collection. Class size will dictate the number of collaborative groups.

Grades

30% weekly notes (1-2 pages including summary of main points, criticisms, and discussion questions, submitted to iSites prior to Monday at 2pm)

25% presentation

45% final project

Required Books

Cambridge Handbook of Experimental Political Science, Eds. Druckman et al.
("Handbook")

Experimental Political Science and the Study of Causality: From Nature to the Lab
Rebecca, Morton and Kenneth Williams ("Morton/Williams")

Part 1: Introduction to Experiments and Experimental Inference (Why experiments?)

Week 1-Introduction to experiments in Political Science (January 24th)

Druckman, James N., Donald P. Green, James H. Kuklinski, and Arthur Lupia. 2006. "The Growth and Development of Experimental Research Political Science." *American Political Science Review* 100: 627-635.

Handbook Chapter 6: Laboratory Experiments in Political Science (Shanto Iyengar)

Handbook Chapter 8: The Logic and Design of the Survey Experiment: An Autobiography of a Methodological Innovation (Paul Sniderman)

Handbook Chapter 9: Field Experiments in Political Science (Alan Gerber)

Recommended

Johnson, George. 2008. *The Ten Most Beautiful Experiments*. New York: Alfred A. Knopf.

Morton/Williams Chapter 2 "Experiments and Causal Relations" (highly recommended)

Gerber, Alan S., Donald P. Green, and Edward H. Kaplan. 2004. "The Illusion of Learning from Observational Research". In Ian Shapiro, Rogers Smith, and Tarek Massoud, eds., *Problems and Methods in the Study of Politics*. New York: Cambridge University Press, pp. 251-73.

Week 2: Causal Inference and Statistical Best Practices with Experimental data (January 31st)

Imai, Kosuke, Gary King, and Clayton Nall. (2009). The Essential Role of Pair Matching in Cluster-Randomized Experiments, with Application to the Mexican Universal Health Insurance Evaluation" (with discussions and rejoinder), *Statistical Science*, Vol. 24, No. 1 (February), pp. 29-53.

Kosuke Imai, Luke Keele, Dustin Tingley and Teppei Yamamoto "Unpacking the Black Box of Causality: Learning about Causal Mechanisms from Experimental and Observational Data", 2011, *American Political Science Review*, 105(4), pp. 765-789

Sylvain Chassang, Gerard Padro i Miquel and Erik Snowberg *Selective Trials: A Principal-Agent Approach to Randomized Controlled Experiment*, forthcoming, American Economic Review

Recommended

Morton/Williams Chapter 3 “The Causal Inference Problem and the Rubin Causal Model” and Chapter 4 “Controlling Observables and Unobservables”

“Experimental Designs for Identifying Causal Mechanisms”, forthcoming, *Journal of the Royal Statistical Society, Series A*, selected for reading by the Royal Statistical Society, with Kosuke Imai and Teppei Yamamoto

Bullock, John G., Donald P. Green, and Shang E. Ha. 2010. “Yes, But What’s the Mechanism? (Don’t Expect an Easy Answer)”. *Journal of Personality and Social Psychology* 98 (April): 550-58.

Wantchekon, Leonard and Jenny Guardardo, 2011, Methodology Update: Randomized Controlled Trials, Structural Models and the Study of Politics, *Journal of African Economies*, 20 (4) pp 653-672

Ho, Daniel E. and Kosuke Imai. (2006). “Randomization Inference With Natural Experiments: An Analysis of Ballot Effects in the 2003 California Recall Election.” *Journal of the American Statistical Association*

Rosenbaum, Paul, 2002, *Observational Studies* (Springer Series in Statistics)

Bowers, Jake and Ben Hansen 2008, “Covariate balance in simple, stratified and clustered comparative studies.” *Statistical Science*.23(2)219-236
